

Gatorshield® the Original and Still Best Choice for Satellite Dish Ground Mounting

Requirement: High-strength, corrosion resistant tubing for mounting satellite dishes.

Fulfillment: Gatorshield tubing from Allied Tube & Conduit.

Gatorshield tubing from Allied Tube & Conduit has been the choice of satellite dish manufacturers, since the industry's early days for two simple reasons. First, no other tube provides the advantages that are an integral part of the Gatorshield brand. Secondly, it is readily available in standard satellite industry sizes that ensure a proper fit without the need for costly and time-consuming adjustments.

Gatorshield Advantages Include:

- Excellent Strength
- Unsurpassed Corrosion Protection
- Ease of Fabrication
- Proper Size Availability for Direct TV, Dish Network, Hughes, and Wildblue.

Gatorshield is available in these sizes commonly used in the satellite industry:

Diameter	Gauge
1.660	18
2.000	16
2.000	9
2.375	10

Contact your sales rep for complete size and gauge capabilities.

Gatorshield tubing is available in bundle quantities through our North American distribution network. For further details or to place an order, contact your local Allied distributor.

“What is Gatorshield?”

The protection of Allied's steel profiles comes from an inline hot-dip galvanizing process. Our signature process produces superior corrosion resistance by utilizing a triple-layer of protection. First 99.99% pure zinc is applied followed by a conversion coating. Finishing the process is a clear organic topcoat that seals in the protection and produces a smooth shiny appearance. Gatorshield is created when a heavier layer of zinc is applied, providing increased corrosion protection. This galvanizing process is performed on the mill to produce a finished product that does not require secondary operations such as batch hot-dip galvanizing.

The advanced processing technique of in-line galvanizing was first introduced by Allied in 1959. Allied Tube has successfully employed these techniques to transform industry and product standards.
